84.03 m², Prague 10, Vršovice, Bartoškova

Total area	84 m ²
Parking	-
Cellar	3 m ²
Reference number	103087

This duplex 2-bedroom apartment with a unique industrial element is currently being built in the new Vodárna Residence in a unique heritage-protected former waterworks building from 1882. The Neo-Renaissance building is located next to a community garden on the border of Nusle and Vršovice, within easy reach of a full range of services and several parks. Completion is planned for spring 2024.

The area of the unit on the 1st and 2nd floors consists of a living room with a preparation for a kitchen, a bedroom, a bathroom (with a shower and toilet), and an entrance hall with a separate toilet. The impressive separation of the rooms by **rounded walls** is created from a preserved and **renovated riveted water tank**.

The high standard facilities include multi-layer **wooden floors**, **underfloor heating** with electric heating mats and the possibility to control via mobile application, Jablotron security system, **heat recovery**, white matt wooden interior doors with paneled frames, **M&T Lusy** handles, Ceratherm, Duravit, Geberit, and Laufen sanitary ware, ceramic tiles, and floor tiles. **The wooden windows** are replicas of the original ones, including fittings. The entrance door will be a new single-wing fire safety entrance door with a 3-point lock and casing profiles. **A pram room** will be available to the residents, and the unit includes **a cellar storage unit**. If interested, it is possible for the interior to be completed according to your own ideas and needs. The entrance area of the Vodárna Residence will be decorated with cleaned **marlite**, the lower part of the historic water reservoir will also be visible, and the floor will be made of original **granite stones and polished concrete**. There will be a new **atypical steel staircase** in the western tower and the original **granite staircase** in the eastern part.

The residence is located right next to the new underpass of the Vršovice Railway Station, from where you can reach the center of the Main Railway Station in 5 minutes. Tram stops are just a few steps away, and transport comfort will also be increased in the future by a D line subway station. There are shops in the immediate vicinity, including a supermarket, restaurants, cafes, schools, and medical services. It is close to a **theater, cinema, and sports field**, and you can connect in no time to the currently emerging unique bike path, the **Vršovice Railway Promenade**. There is a community garden in the neighborhood, and it is possible to walk to **Havlíčkovy Sady, Jezerka or Folimanka park** or **Tyršův Hill** in a short time.

Production factors explain the difference in output. To 3.0 million t/d, CO_2 is an average output proxy (0.00019 t/d/t). It produces about average output, but at high marginal costs, which increase as the stock position of the plant ages. In other words, older plants produce more output, but at a higher cost. When a stock level of output is reached, then the power plant is closed, leaving gains captured by upstream players by (1) *direct*, through the use of specific and (2) *indirect* through the use of carbon trading. Upstream players capture the gains by (1) *direct*, through the use of specific and (2) *indirect* through the use of carbon trading.
